Based in Darmstadt · Open to software engineering roles in Germany

Cihan Sezer Özkamer

Software Engineer · C# · Unity · Python

Computer engineer with hands-on **C# software development** experience, including a **Unity mobile game that reached 100,000+ downloads**. I work with **OOP, SOLID, design patterns, debugging and performance optimisation**, and build Python tools and **LLM-based agents**. Interested in applying software engineering to **complex technical systems**. Starting an **M.Sc. Computer Engineering at Universität Duisburg-Essen**.

Bullet Rush – Mobile Survivor Game

Game Developer Intern · Built under the mentorship of a professional studio

A 3D hyper-casual survivor game for Android, designed and developed during my internship – **reached over 100,000 downloads**.

- Used **object pooling** for bullets and enemies to keep performance smooth on mobile.
- Managed assets with **Addressables** and made gameplay data-driven with **ScriptableObjects**.
- Built core systems such as knockback mechanics using **Zenject** dependency injection, **Observer** and **Singleton** patterns.
- Debugged and optimised C# scripts to reduce load times; deployed and validated the Android release.

FREELANCE · CLIENT PROJECT · WEB · 2026

İST Kesintisiz Güç – Corporate Website

Sole developer · Design, development, SEO & deployment

Live product & service website for an Istanbul-based UPS (uninterruptible power supply) company, on a custom domain.

- Data-driven architecture: all products, services and contact info come from **one data file**, so the client can update content without touching HTML.
- Technical SEO: per-page meta & canonical tags, Open Graph, **JSON-LD** (LocalBusiness, Product, Service), sitemap and 8 static product pages.
- Python (PyMuPDF) build script that turns product brochures into responsive page previews; automated SEO checks.

PERSONAL R&D · VR

VR Interaction Demos

Solo developer · Tested live on a Pico 4 headset

A set of VR scenes exploring core interaction and locomotion systems used in modern VR games.

- Locomotion: continuous movement, **teleportation** and **climbing**.
- Interaction: grabbable objects, snap zones and hand-presence feedback.
- Iterated with live headset testing for comfort and responsiveness.

PERSONAL PROJECT · MOBILE

Say or Boom – Party Game

Solo developer · Game design, programming, monetization

A pass-the-phone party game: answer the prompt and pass the phone before the hidden bomb timer explodes.

- Implemented a full **monetization** loop: rewarded ads and in-app purchases to unlock levels.
- Integrated **Unity Ads, LevelPlay / ironSource** and Google Ads.
- Went through the Google Play publishing process end to end.

`Unity` `C#` `LevelPlay` `IAP` `Addressables`

TECHCAREER BOOTCAMP · FINAL PROJECT · PC · 2023

TANK2023 – 3D Tank Defense

Solo developer · Earned the Junior Game Developer certificate

A 3D remake of the classic arcade tank genre: defend your base from waves of AI-controlled enemy tanks.

- Enemy AI with **NavMesh** pathfinding and targeting.
- Reusable level pieces with **Prefab Variants**; enemy spawning, health and win/lose states.
- Delivered under bootcamp deadlines and code review.

ACADEMIC PROJECT · MOBILE · 2022

Rhytris – Rhythm Puzzle Runner

Game designer & developer · Prototype

A mobile prototype that blends rhythm timing, Tetris-style block rotation and endless-runner movement.

- Core mechanic: rotate blocks 90° in time with the music to fit through generated wall patterns.
- Designed modular block assets and clear touch feedback for small screens.

`Unity` `C#` `Game design`

PERSONAL TOOL · DESKTOP · 2026

Multitasking & Reflex Simulator

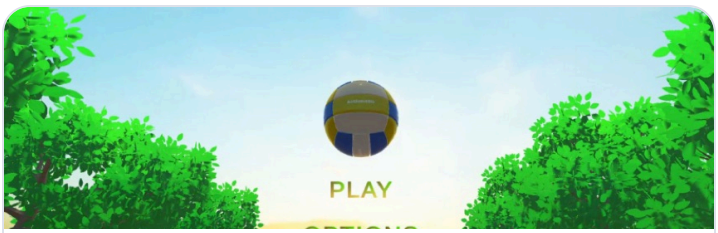

Solo developer · Python desktop app

A training app that simulates the multitasking test used in airline cadet-pilot assessments.

- Runs **three tasks at once**: visual reflex, short-term memory and audio odd/even tracking.
- **Joystick**, keyboard and on-screen input; tracks correct, wrong and missed responses.
- Configurable timings saved to JSON; shipped as a Windows executable.

ACADEMIC · FINAL PROJECT · PC · 2023

Beach Volleyball – Local Multiplayer

Solo developer · Fundamental Game Development course

A split-screen, two-player beach volleyball game on a single PC.

- Full **animation pipeline**: FBX import, retargeting, Animator controllers and smooth transitions.
- Split-screen cameras and two-player input; low-poly art in **URP** for performance.

`Unity URP` `C#` `Animator` `Local multiplayer`

ACADEMIC · GAME DESIGN COURSE · PC · 2021–22

Age of Vehicles – Endless Driver

Solo developer · Design & programming

A top-down endless driving game where you progress through eras – from a wooden cart collecting fruit to the Space Age.

- Implemented **vehicle wheel physics** tuned for each era's vehicles.
- Built a **save system** to keep player progress between eras and sessions.
- Procedural road/item generation for replayability.

`Unity` `C#` `Physics` `Save system`

{ agent }

PERSONAL PROJECTS · ONGOING · SOFTWARE · 2026

AI Agent & Browser Automation

Solo developer · Python

Python-based software agents that combine LLMs with external systems to automate multi-step tasks.

- Integrating **LLMs, REST APIs** and structured **JSON** data with browser automation workflows.
- Focus on modular implementation, debugging and reliable interaction with external systems.

`Python` `LLM APIs` `REST` `JSON` `Browser automation`

BACHELOR'S THESIS · ALGORITHMS · 2023

Pathfinding in Games – DFS, BFS & A*

Author · Muğla Sıtkı Koçman University

Implemented and compared classic search algorithms inside interactive game environments.

- Implemented **DFS, BFS and A*** and analysed their behaviour across gameplay scenarios.
- Compared performance and solution quality, applying data structures to real-time applications.

PERSONAL PROJECT · WEB · 2026

Workout Tracker

Solo developer · React single-page app

A weight-tracking web app for progressive overload on a Push / Pull / Full Body programme.

- Built with **React 18** and deployed to GitHub Pages.

`React` `JavaScript` `GitHub Pages`

CAREER

Experience

2026
Freelance

Web Developer · İST Kesintisiz Güç

- Designed, built and launched the company's corporate website on a custom domain.
- Implemented technical SEO (structured data, sitemap, canonical/meta tags) and a content model the client can edit easily.

Feb 2024 – Present
İzmir, Türkiye

Operations Manager · Çiçek Sünger

- Coordinate daily operations, workflows and documentation while adapting to changing priorities.
- Oversee financial tracking, invoicing and reporting with a strong focus on accuracy and process quality.

2023
Illertissen, Germany

Web Management Intern · EXVAPE GmbH

- Contributed to UI design and implementation for web portals, infographics and e-commerce interfaces.
- Contributed ideas for customer-centred UX and helped prepare UI/UX workshops and presentations.

2022
İzmir, Türkiye

Game Developer Intern · No Surrender Studios

- Designed and developed a 3D hyper-casual mobile game in C# and Unity (Bullet Rush) that **reached over 100,000 downloads**.
- Built object-oriented gameplay systems with the Zenject DI framework; debugged and optimised performance, reducing load times.
- Integrated and deployed the Android build, validating functionality through the release workflow.

HIT Games Conference – Berlin
Dec 2023 · Attendee at a European games industry conference (300+ gaming brands)

About me

I'm a computer engineer who enjoys turning ideas into **well-structured, working software**. My internship taught me how a studio ships a product used by **100,000+ people**, and my thesis on DFS, BFS and A* gave me a solid base in **algorithms and real-time systems**.

Beyond games I build practical tools – Python agents that combine LLMs, REST APIs and browser automation, a cadet-pilot test simulator, and an SEO-optimised website for a real client. Managing operations at a company since 2024 has taught me **ownership, documentation and accuracy**. I'm now based in Darmstadt, learning German and preparing for my M.Sc. at UDE.
